

Next Generation Voice-Directed Warehousing

Fast ROI with Voice and Data Collection with One PDA Device is Reducing Error Rates by up to 80% and Improving Productivity by up to 30% for Warehouse Managers

Implementing voice technology within the warehouse delivers immediate results. Existing Aldata customers have achieved 80% error reduction rates and 30% productivity improvements followed by quick ROI. The facts speak for themselves. Now with G.O.L.D. VOCAL PDA, Aldata couples voice technology with your existing mixed data collection methods on a single PDA device to deliver multiple capabilities at substantially lower costs than traditional voice-only units.

“We are experiencing tremendous success from deploying Aldata VOCAL. The order selectors wear a headset and their hands are free to do other tasks. As a result, they are now more productive plus we are able to greatly reduce the amount of paper which supports our Green Strategy. Smart & Final can open warehouses faster and at a lower cost.”

Marie Robinson,
SVP Supply Chain Management,
Smart & Final

Aldata G.O.L.D. Vocal delivers proven performance

G.O.L.D. Vocal PDA is the second generation of Aldata’s highly successful Vocal solution which is used by more than 6,000 picking operators daily for order preparation, order splitting and inventory across all product types (dry, fresh and frozen). Thanks to a comprehensive partnership program, Vocal PDA is already certified for use on many of the industry’s leading hardware devices including Datalogic, LXE and Motorola to ensure device compatibility.

For an increasing number of customers, Aldata G.O.L.D. Vocal on a PDA is the single solution for warehouse applications. Multi-modal capabilities mean users can interact with G.O.L.D. Vocal in multiple ways: screen, pistol, keyboard, barcode reader – 1D and 2D – Datamatrix, electronic tag reader (RFID), voice and photography. Each operator only needs to learn to use one device for multiple levels of applications, including voice-directed operations. This means they are more effective, faster, user-based fatigue is reduced, and there are productivity gains for the short and long-term.

In addition, for retailers, because the same hardware can be used across all your tasks, in the warehouse and stores, you gain substantial savings on support and infrastructure costs.

Aldata
100% Retail-Wholesale

“The benefits brought by the implementation of G.O.L.D. Vocal include increased quality because the error rate is divided by eight. It has increased productivity by approximately 12 percent and improved stock management because we can integrate perpetual inventory during order picking.”

Alain Robeau,
Support Services Director,
Leclerc Leclsaud

Aldata G.O.L.D. Vocal enables you to:

Reduce error rates and make rapid productivity gains

Operators only need to learn how to use one device for multiple levels of operations, including voice-directed. As a result, they are more effective, faster, they feel less fatigued, and they stay engaged ensuring productivity gains are maintained in the long-run. Error rates are reduced by up to 80%.

Profit from immediately operational technology

G.O.L.D. Vocal works by generic speech recognition and requires no pre-registry. The technology is immediately operational. It also means that staff can share the PDAs, making the system more flexible, faster and more cost-efficient. Organisations that rely on temporary or seasonal staff can save time on training and get their staff up and running fast.

Apply more leverage in negotiations with hardware suppliers

By combining voice and data collection technologies into a single device, you enjoy greater independence in the choice of hardware and supplier. You can deploy the hardware from the same supplier in support of all mobility tasks in, for example, the warehouse and stores. As a result, you gain more leverage when negotiating new hardware as well as substantial savings on support and infrastructure costs.

Implement internal cost savings

G.O.L.D. Vocal delivers cost-efficiency benefits across the organisation as IT and logistics managers have only one environment to support for multiple applications. This means they reduce training time and IT costs.

Integrate easily with any warehouse management system

G.O.L.D. Vocal interfaces with all major warehouse management systems. Organisations are not locked in to a particular software partner or system integrator. In addition, as standard PDAs can work with a variety of packages and languages, this increases their flexibility in the workplace.

Benefit from Aldata’s comprehensive partner programme

Through Aldata’s partner programme, G.O.L.D. Vocal PDA is already certified for use on many of the industry’s most popular hardware devices including Datalogic, LXE and Motorola to ensure device compatibility.

Future proof your organisation

In the long-term, you can integrate and activate PDA multi-modal applications when you need to. Organizations can extend the use of the PDA beyond orderpicking and inventory into other areas of the business, such as the redesign of other business processes.

For existing customers, G.O.L.D. Vocal on a PDA co-exists with current investment based on voice-dedicated terminals. This allows you to migrate to PDAs in line with your organisation’s hardware replacement strategies.

Aldata 100% Retail-Wholesale

At Aldata 100% of our business is dedicated to retail and wholesale business improvement. We provide our customers with modern, flexible and integrated software solutions specifically designed to increase productivity, performance and profitability. With over 24,000 successful installations across 55 countries, from convenience store to hypermarket, 480+ live warehouses and customers with 5 to 5,000 outlets, we consistently deliver the goods for retail and wholesale business improvement.
